

Assignment: Project & Task Manager App

Objective

Build a mobile app using React Native (Expo) with a Node.js backend that allows users to manage projects and tasks with a clean, interactive UI and structured state management.

Tech Requirements

- Frontend: React Native (Expo)
- State Management: Redux (Thunk or Saga)
- Backend: Node.js (Express)
- Database: Any (MongoDB / PostgreSQL / etc.)

Features to Implement

1. **Authentication**
 - a. Signup & Login
 - b. JWT-based authentication
 - c. Persist user session
2. **Projects**
 - a. Users can: Create a project, View list of projects, Delete a project
 - b. Each project should have: Title, Description
3. **Tasks**
 - a. Inside each project: Create tasks, Mark task as complete/incomplete, Delete task
 - b. Each task should have: Title, Status, Optional due date
4. **State Management (Redux)**
 - a. Proper store structure, Async API handling, Separate slices, Global updates reflected
5. **UI/UX Expectations**
 - a. Smooth navigation, Proper spacing, Loading indicators, Polished feel, Light/Dark mode
6. **Backend (Node.js)**
 - a. REST APIs for auth, projects, tasks; Middleware; Validation & Error handling

Technical Requirements:

- **Frontend:** React (or React Native for extra points)
- **Backend:** Node.js with Express
- **Database:** PostgreSQL
- **API Requests:** Axios
- **Authentication:** Simple OTP-based auth

Deliverables:

1. A GitHub repository with the complete codebase.
2. APK/live link of the working app

Evaluation Criteria:

- Functional implementation of CRUD operations.
- Effective use of Axios for API requests and protected routes.
- Basic implementation of OTP-based authentication.
- Code quality.

Notes:

- **Incomplete Projects:** You can submit a half-baked project. We are more interested in discussing your thought process, problem-solving abilities, and how you learn and adapt to new challenges.

Bonus (Optional)

- Edit functionality, filtering, pagination/search, and animations.
